

ADDENDUM

CRACK THE CODE KIT

In an effort to ensure that your experience with Science Unlocked® meets our standards, we have sighted a few errors in your Crack the Code manuals.

Please observe the following corrections in the Student Workbook

- The codon charts on pages 37 and 38 have a capitalization error. The amino acid Glutamine should be abbreviated as GLN not GIN. The "L" is lowercase in the image provided.
- In "Just For Fun" on page 40, the directions should state "Fill in the family tree for that trait."

On page 14 of the Teacher Guide, please observe the following corrections:

- The answer to the question in the "Coding In DNA" section states GIN GIN GIN TYR, but should state GLN GLN GLN TYR. The "L" is lowercase in the answer provided.
- The answer to question 2 in the "Can You Code?" section states "CEG codes for GLN or glutamine." CEG should be CAG as it is in the question provided to students.
